

*It is recommended that two people are required to assemble the following furniture.*

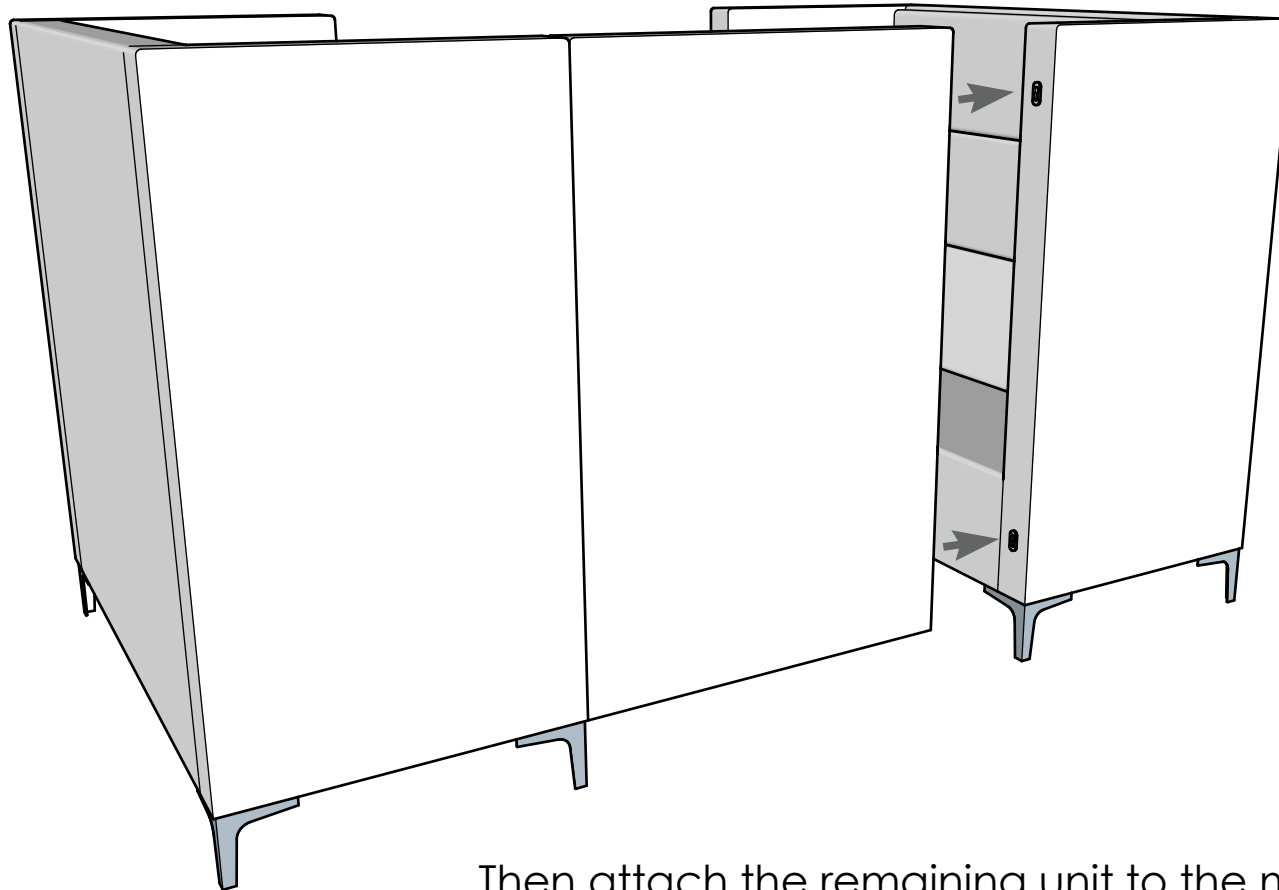

Attach the middle panel to the first unit as shown above. The table fixing points must face inside the unit.

STEP 1

To attach, line up the panels, push them together, then slide down until they're fixed firmly together.

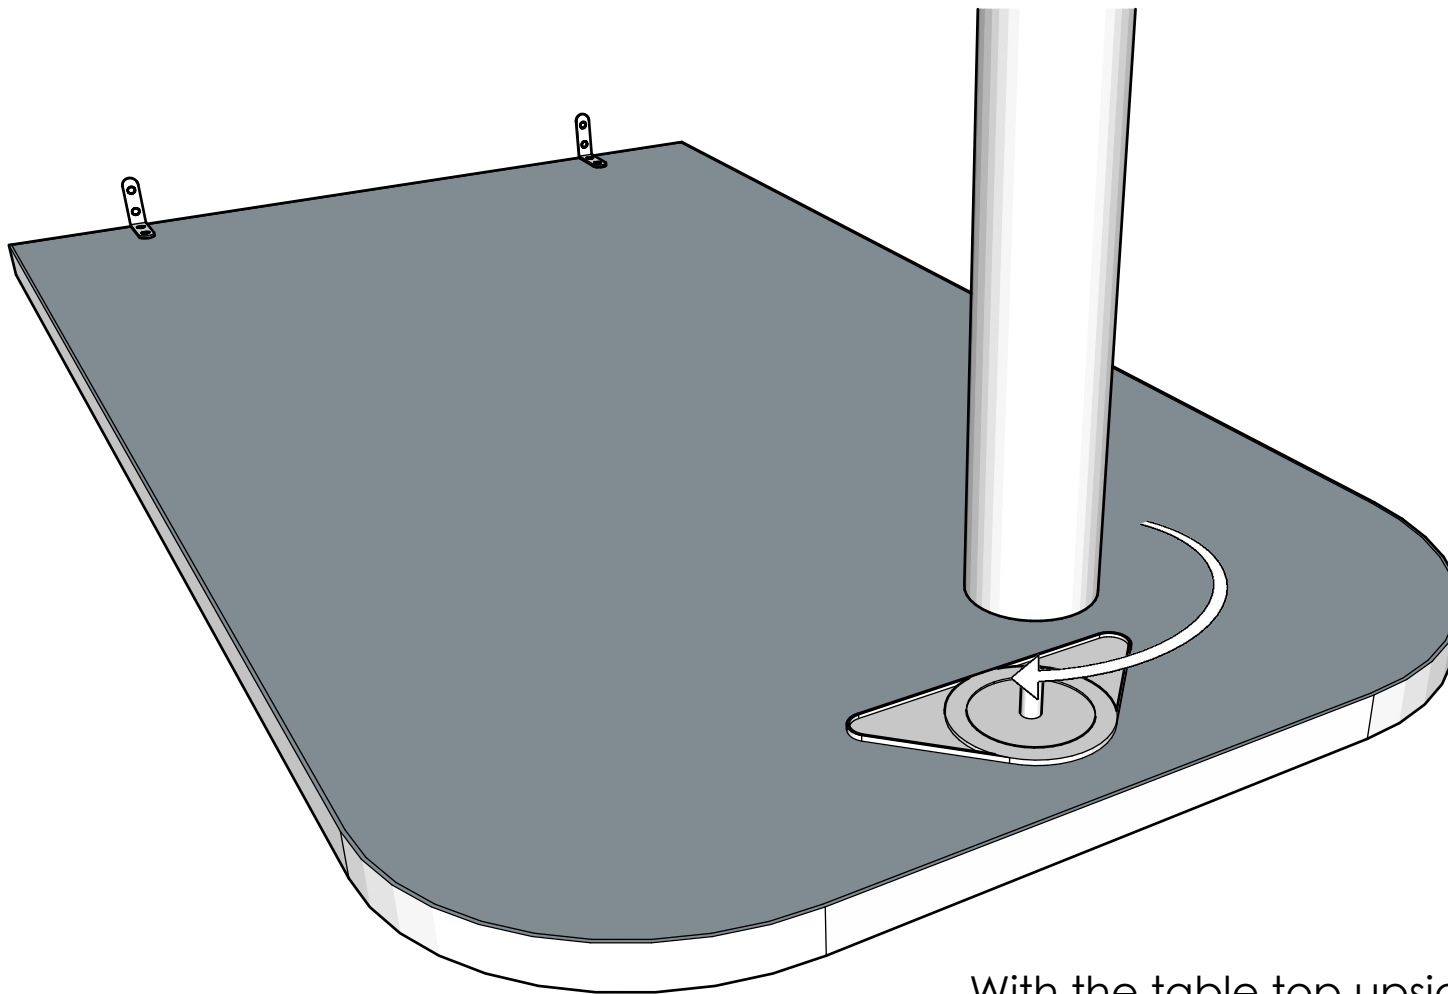

Then attach the remaining unit to the middle panel using the same process as in Step 1.

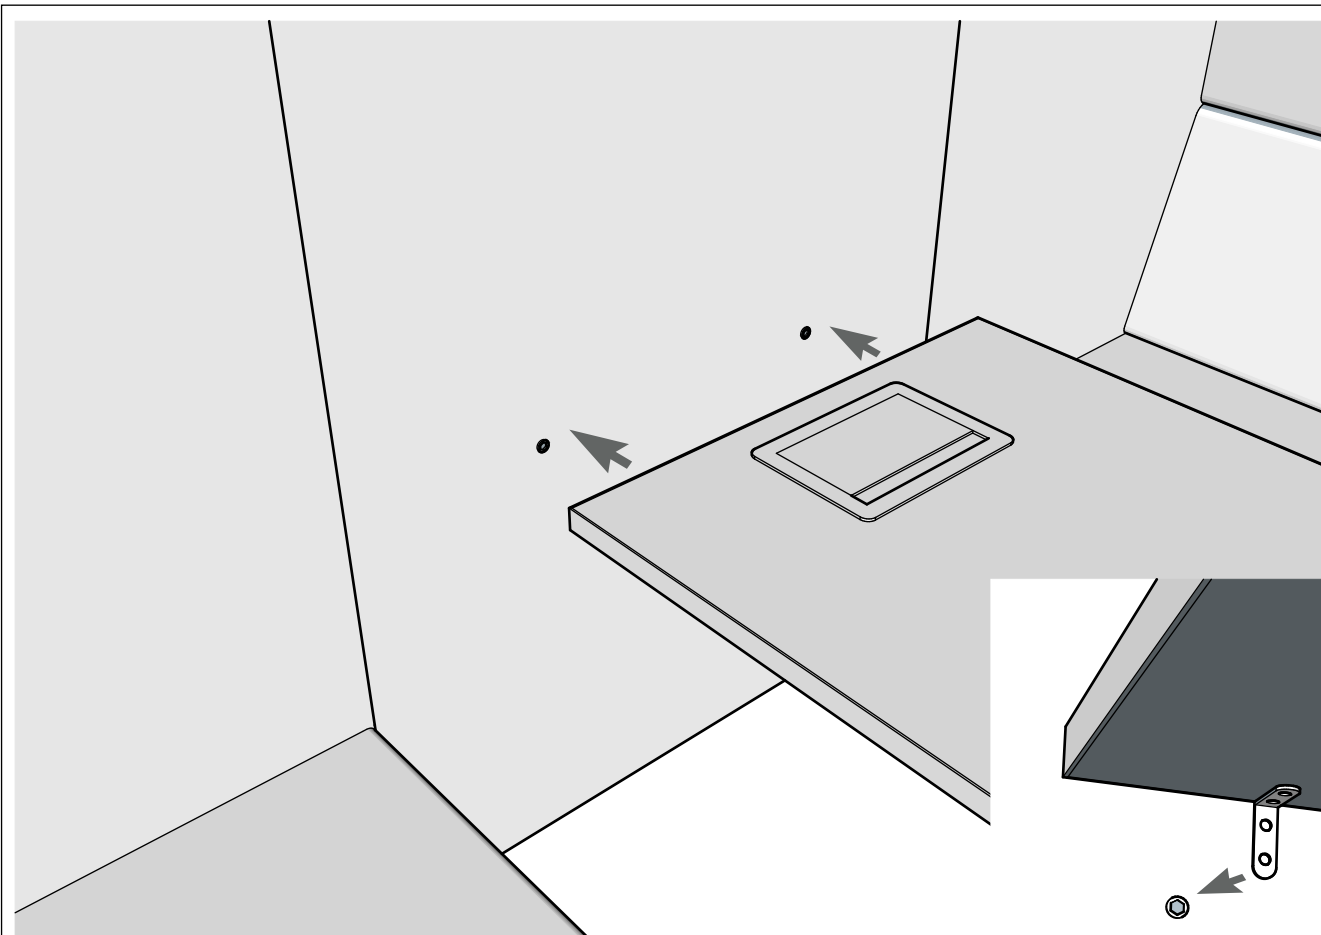

STEP 2

*Note: extra care must be taken if the location has an uneven floor*

With the table top upside down,  
attach the table leg as shown above.

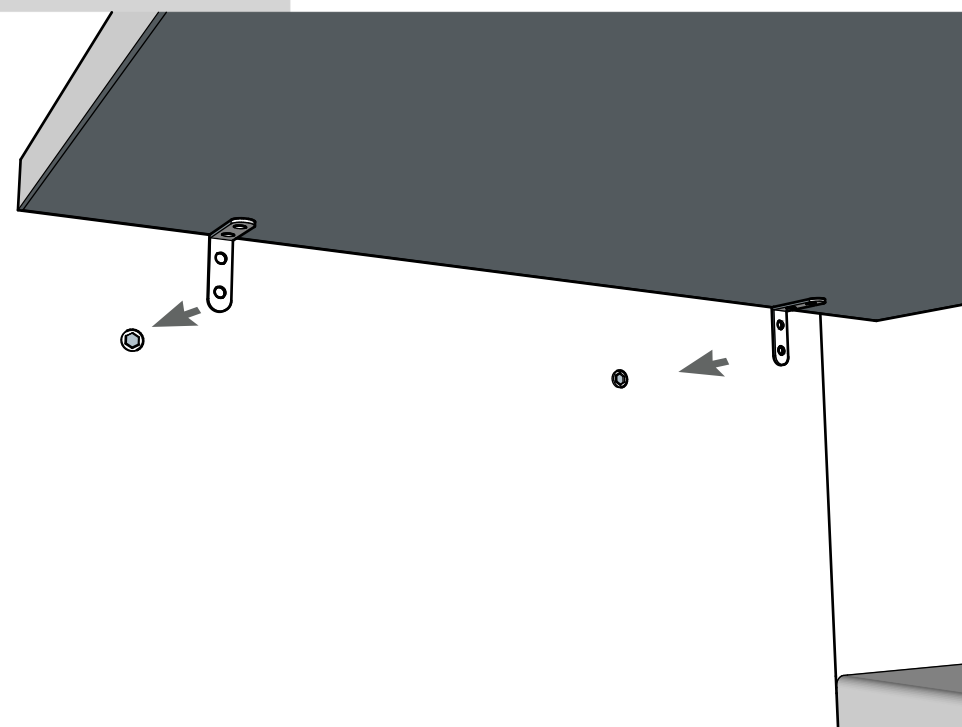

STEP 3

If your unit has an in-desk power unit, attach the power lead provided to the unit and to the nearest power source.

You're now finished!

Finally, attach the table top to the middle panel as shown above, using the fixings provided. A cross-headed screwdriver is needed for this step.

STEP 4
